Run the application	1
Features	1
Technical features	1

Run the application

- The application can be accessed through [\(Heroku link\)](#)
- Alternative the application can be accessed when running via localhost:8080

Features

- When opening the webpage, the user lands on the index page
- Clicking the button to get to the User Documentation opens this pdf document in a new tab.
- The pages (...) are only accessible when logged in
- The shop page features 4 different products (A, B, C, D)
- Enter the desired number for each product and the costs are calculated. The button then changes to "order"
- If the entered number is too high then the user gets informed, further, the user can click the arrows to adjust the numbers and if a number is too high it will automatically adjust it to the max amount by clicking the arrow once.

Amount:

Can't be more than 250!

- [Changing the URL to either "localhost:8080/403" or "localhost:8080/404"](#) redirects the user to the corresponding pages.

Technical details

- The project is available on GitHub. The repository is private
- IntelliJ and Visual Studio was used for collaboration to program the application
- The application has an in-memory database, therefore data gets deleted after closing the application.
